Power Dekor®
ENGINEERED HARDWOOD FLOOR

The smartest choice for your floor

WHY Power Dekor Engineered Hardwood Floor?

The Strongest Surface

Extra strong lacquer can withstand daily wear and tear

Environmentally safe

Our floor contains no harmful chemical emissions

The Strongest Joint

Patented locking system make installation easier without gaps

The Best Climate Stability

Minimise movement during climate changes.

Finish

The combination of hardwood's natural durability and today's high-performance urethane finishes means hardwood flooring will stand up to the punishment of active families, and still keep its beauty.

Colour

The species' natural colour and the stain applied to the wood creates a wide spectrum of colour options. Colour can be darkened or change over time especially when exposed to direct sunlight.

Gloss

The gloss level of hardwood flooring does not affect its durability or performance, so your choice of high gloss or low gloss is a matter of personal preference. Low gloss floors tend to hide the appearance of minor surface scratches that occur over time. Conversely, higher gloss floors can make scratches look more obvious.

Style and Texture

Whether your taste is rustic, traditional or contemporary, Power Dekor can offer a wide variety of styles and surface textures to meet your needs. Before making your selection, explore the many looks available, from a smooth surface that provides a sleek, sophisticated, more contemporary look, to hand-scraped surface that creates a more rustic and casual look.

3-Layers Engineered Hardwood Flooring 100% Genuine Hardwood

- a** The four to six layers of UV-cured acrylic finish are factory-applied and ready to be walked on as soon as the floor is installed.
- b** The hardwood top layer is available in many different wood species and patterns.
- c** A supporting layer guarantees strength and dimensional stability.
- d** Our 15 mm thick products have a backing of pine or spruce, giving added dimensional stability to these floors, which can be installed using the floating method.
